LOCATION

WIS 164 – from County Q to County E, Washington County

IMPROVEMENTS

The project will improve approximately 7.5-miles of roadway in the village of Richfield and the town of Polk. It includes roadway rehabilitation, reconstruction of five spot-locations to improve sight distance, and the construction of a new roundabout at the intersection of WIS 164 and WIS 167.

Spot locations that will be reconstructed to flatten roadway grades and improve sight distances consist of:

- Shady Lane
- Monches Road
- Hubertus Road
- WIS 167
- Pleasant Hill Road

Also, as part of this project, the two existing Shady Lane connections to WIS 164 will be removed and Shady Lane will be extended to the north to connect to Hanson Drive where drivers will be able to access WIS 164.

The proposed improvements will address safety concerns along the length of the corridor by updating the highway to current design standards, improving traffic operations at several key locations, and enhancing mobility.
